

CREATING A CLEANER ENERGY FUTURE

HUTCHINSON'S POWER SUPPLY MIX

Our diverse mix of power supply resources results in reliable, affordable and environmentally friendly electric service for Hutchinson's citizens and businesses.

In 2021, Hutchinson purchased Renewable Energy Certificates (RECs) to offset the electricity in our power supply mix that came from fossil fuels. RECs are proof that electricity was generated by qualifying carbon-free, renewable facilities — such as wind and solar farms — and fed into the electric grid. These REC purchases help Hutchinson Utilities Commission and its customers move to a net-zero carbon future, which means that all emissions from electricity used in Hutchinson are counterbalanced by an equivalent amount of carbon-free, renewable generation.

For more information about how our power supply percentages are calculated, go to mrenergy.com/energy-resources/generation.
